

Do you need such a high fuel-consumption car?

Please reflect that our use of fuel is likely to be increasing current and future worldwide suffering caused by global warming and climate disasters.

The increased frequency and severity of droughts, storms, floods, wildfires and extreme temperatures is causing hunger, homelessness, disease, injury, loss of life and livelihood.

Atmospheric greenhouse gas concentration is increasing rapidly - we all have the responsibility to cut emissions to reduce the risks for our children and grandchildren - one of the major influences an individual can have is to drive an economical car.

If you don't believe it, see if the "Scepticism" page on our web site: www.climate-concern.com makes any difference. If you wish, you can let us know your opinion.

And there are many more things we can all do to reduce energy consumption – see our "Saving Energy" page. You might even get switched on to the idea and join our campaign!?
